## MULTIPLICATION TABLE

Fill out the entire board by multiplying without any help. When you are done create flashcards for the ones that seemed a bit tough to you.
You will notice that there are some boxes that are gray, that is because of the commutative property. This means that when multiplying numbers together, it doesn't matter which order they are in! So if you know $6 \times 9=54$, then you should also know $9 \times 6=54$. ())
